AI for Women's Health

Women's Health Diagnostic Report

Report ID: **RPT-2026-0002**

Patient Name:	**Priya Nair**	**Referring Physician:**	Dr. Dr. Ananya Sharma
Patient ID:	P-2026-0001	**Scan Type:**	Mammogram Screening
Age / Gender:	34 yrs • Female	**Indication:**	Palpable lump, family history (second_degree)
Date of Scan:	2026-10-04	**Report Date:**	2026-10-04 13:02 UTC

2. CLINICAL SUMMARY

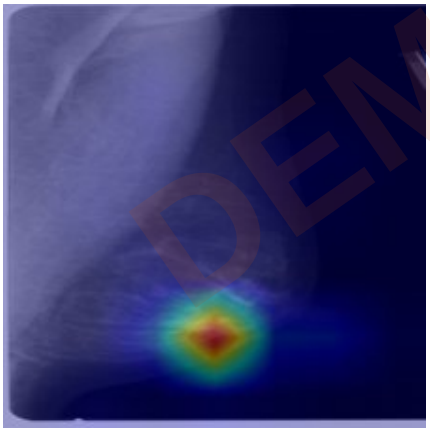
Patient evaluated for breast pathology with multimodal diagnostic risk stratification. Review the recorded clinical inputs and image assessment before signing.

Age:	45	**Menopausal Status:**	peri_menopausal
Family History:	second_degree	**Palpable Lump:**	yes
Lump Size Cm:	1.2	**Lump Location:**	upper_outer
Nipple Discharge:	no	**Skin Changes:**	no

3. IMAGING FINDINGS

High-resolution diagnostic imaging analyzed with deep neural feature extraction.

- Possible architectural distortion (Image risk score: 64%)
- Borderline density irregularity (Image risk score: 64%)



AI Visual Saliency (Grad-CAM Heatmap):
Warmer colors (red/yellow) indicate focal regions that contributed highest activation weighting to the deep learning vision model decision.

4. AI AND CLINICAL ASSESSMENT

Component	Result	Interpretation
AI Image Model (AuraMed ImageNet)	0.64	Image model score: 0.64; interpret with the complete assessment.
Clinical Risk Model (Clinical Factors Model)	0.53	Normalized clinical risk: 0.53 based on patient history

DEMO SAMPLE

This report is generated with the assistance of AI models and validated clinical formulas. It is intended to support clinical decision-making and does not replace the judgment of a qualified medical professional. AuraMed is a decision support tool, not a diagnostic device.

Multimodal Fusion Weighted Average (60/40)	0.60	Stratified Risk Category: HIGH

5. FINAL RISK ASSESSMENT

Final Risk Assessment: HIGH

Clinical oncology or radiologist referral recommended with short-interval 1-month imaging follow-up.

6. RECOMMENDATIONS

1. Clinical oncology or radiologist referral recommended with short-interval 1-month imaging follow-up.
2. Correlate imaging observations with physician clinical palpation and symptom progression.
3. Provide patient with comprehensive screening summary and schedule appropriate interval follow-up.
4. Discuss potential ultrasound-guided core biopsy or fine-needle aspiration if indicated.

AI Clinical Insight: *The ensemble neural network and clinical risk formula converged with 80% confidence based on consistent multimodal signals.*

7. CONFIDENCE AND LIMITATIONS

AI Confidence: High (80.0%)
